ENABLING DISCOVERIES IN THE EARTH SCIENCES THROUGH THE GEOSCIENCES NETWORK GEON

GEON
The Geosciences Network

Featured Science Activity
Synthetic Seismogram Computational Tool Now Available
The GEON team recently developed a new tool for generating synthetic seismograms. This tool is available for research and educational purposes. It is a Java-based application that can be run on a Windows or Linux platform. The tool is designed to be easy to use and to provide accurate results. For more information, please visit the GEON website.

About the GEON Portal: Resources for Administrators
The GEON Portal is the entry point for the Geosciences Network. It provides a central location for users to access the network's resources. The portal is designed to be user-friendly and to provide a consistent experience across all devices. For more information, please visit the GEON website.
